Transforming Technology Into Solution

A Data Warehouse Architecture (DWA) is a way of representing the overall structure of data , communication, processing and presentation that exists for end-user computing within the enterprise .

The architecture is made up of a number of Interconnected parts:

- Operational Database
- External Database Layer
- Information Access Layer
- Data Access Layer
- Data Directory (Metadata) Layer
- Process Management Layer
- Application Messaging Layer
- Data Warehouse Layer
- Data Staging Layer
